

Account Manager Comments RIO ARC GBP

The success of the ARC Bullion Account which is valued in USD is well documented. To meet the membership demand for a similar physical gold investment product based in UK Sterling RIO has launched this account.

The account has exceeded its objective and this month is yet another which demonstrates that the account is literally worth more than its weight in gold. Figures show that gold bullion lost 7.60% an ounce in February; however the ARC posted a gain of 1.35%. The net result of this performance meant that the account had exceeded the value of gold bullion by almost 9% in February.

The ARC Sterling continues to significantly outperform gold bullion in bar form since its launch in December 2014. Detailed analysis of bullion funds and related investments outside of RIO revealed that their performance had been very lacklustre. In a purely statistical comparison, RIO ARC Bullion USD account has outperformed all comparable physical gold bullion investments throughout 2014 to date.
