MANAGER COMMENTS

RIO Platinum Account USD gained 1.27% during December. Looking back, spot platinum fell 10.10% during 2021, in stark comparison RIO Platinum gained over 5% in the same period. The difference in performance underlines the benefit of investing in an actively traded platinum investment, as opposed to buy and hold strategies employed by many mainstream investment companies. The RIO Platinum account being actively traded does require far more effort, but without effort there is no reward. RIO design their bespoke products especially for the RIO Club and its membership, they are not available to the general public.

Looking forward, platinum is in an oversold position and is set to benefit from the rebound trade on the normalisation of chip shortages in the auto industry. Further upside comes from the fact that there has been building speculation that in the auto industry there will be a switch from the use of palladium to platinum.

INVESTMENT OBJECTIVE

To provide a secure alternative to that offered by the lacklustre industry standard platinum bullion investment products or funds. The Platinum Account holds 100% of its Bullion assets in unencumbered and uncirculated Platinum bars, officially released by several government mints.

Platinum can be used within investment portfolios to protect global purchasing power, today this is very pertinent given that several governments are employing policies which ultimately target a devaluation of their individual currencies. As this global currency war has escalated there has been an increased risk of a currency debasement and the fact that platinum can offer protection from this event is very attractive in itself. Precious metals, including platinum, are often produced in emerging market countries, with demand coming principally from industrialised nations. The political and economic situation is, however, far less stable in many emerging market countries than in the developed world. They are generally much more susceptible to the risks of rapid political change and economic setbacks which affect precious metal prices and again provides scope for a strong upside.
