

RIO PLATINUM ACCOUNT USD

1 February 2025

MANAGER COMMENTS

RIO Platinum USD gained 1.27% during January. As the month opened, the account held 36.33% of its assets in physical platinum and at the time the metal was trading around \$910.70. I sold 15% of the platinum held on Monday the 8th at \$952.02, taking profits for those invested. By January the 29th the metal was trading around \$943 an ounce but then rallied back on the 30th and finally closed the month at \$984.62.

The Market - The platinum market faces its most significant supply shortfall deficit in 10 years. Platinum's supply deficit is expected to average around 769,000 ounces between 2025 and 2028, a revision from January's long-term projected average deficit of 546,000 ounces. South Africa produces 70% of the world's supply, and this country's platinum mining industry has entered an irreversible decline as producers struggle with low prices. While job cuts have provided short-term relief for mining companies, they will have long-term consequences, eroding South Africa's production capacity and leading to a potential shortfall in global supply. This increase in deficit is a telling sign of coming shortages; with that, one should generally anticipate price increases. As I have said before, the supply-demand trade is the best in the world; it's a given money maker.

INVESTMENT OBJECTIVE

To provide a secure alternative to that offered by the lacklustre industry standard platinum bullion investment products or funds. The Platinum Account holds 100% of its Bullion assets in unencumbered and uncirculated Platinum bars, officially released by several government mints.

Platinum can be used within investment portfolios to protect global purchasing power, today this is very pertinent given that several governments are employing policies which ultimately target a devaluation of their individual currencies. As this global currency war has escalated there has been an increased risk of a currency debasement and the fact that platinum can offer protection from this event is very attractive in itself. Precious metals, including platinum, are often produced in emerging market countries, with demand coming principally from industrialised nations. The political and economic situation is, however, far less stable in many emerging market countries than in the developed world. They are generally much more susceptible to the risks of rapid political change and economic setbacks which affect precious metal prices and again provides scope for a strong upside.

INFORMATION

NAV	202.81
Launch Date	March 2017
Investment Manager	William Gray
Currency	USD
Minimum Investment	50,000
Establishment Charge	700
Annual Management Fee	1.00%
