MANAGER COMMENTS

RIO Platinum USD gained 0.14% this month, this being its fourth consecutive gain. By 20th May, the metal rallied to a high of \$1,096.26 before giving up some ground at month's end. Again, I reiterate that the supply-demand trade is the mother of all trades, and as such, it is likely that platinum will rally back to \$1,000 an ounce in the coming months. This is feasible given that the market was (and remains) in a structural deficit.

The platinum market is facing its largest supply shortfall deficit in 10 years. Our analysts concur that the market's deficit in 2024 will increase to near 600,000 ounces, to put this into perspective last year the deficit was just short of 519,000. This increase in deficit is a telling sign of coming shortages, and with that one should normally anticipate price increases. As I have said before, the supply demand trade is the best trade in the world, it's a given money maker. Platinum's demand should stabilise at or around 7.61 million ounces. The auto sector consumption was forecast to fall back significantly by many, but in reality, the demand fell far less than market pundits thought in 2024. This in a period where primary supply also fell, and many analysts failed to take this into consideration.

INVESTMENT OBJECTIVE

To provide a secure alternative to that offered by the lacklustre industry standard platinum bullion investment products or funds. The Platinum Account holds 100% of its Bullion assets in unencumbered and uncirculated Platinum bars, officially released by several government mints.

Platinum can be used within investment portfolios to protect global purchasing power, today this is very pertinent given that several governments are employing policies which ultimately target a devaluation of their individual currencies. As this global currency war has escalated there has been an increased risk of a currency debasement and the fact that platinum can offer protection from this event is very attractive in itself. Precious metals, including platinum, are often produced in emerging market countries, with demand coming principally from industrialised nations. The political and economic situation is, however, far less stable in many emerging market countries than in the developed world. They are generally much more susceptible to the risks of rapid political change and economic setbacks which affect precious metal prices and again provides scope for a strong upside.

INFORMATION

NAV	196.21
Launch Date	March 2017
Investment Manager	William Gray
Currency	USD
Minimum Investment	50,000
Establishment Charge	700
Annual Management Fee	1.00%
Administration Fee	1.00%
Dealing Frequency	Monthly

INVESTMENT MANAGER

RIO's Investment Manager has vast experience having designed, launched and managed several Government licensed mutual funds over the past two decades. He has actively traded stocks, bonds, currencies and commodities with some degree of accuracy. He has a proven track record combined with all the advantages of an experienced multi asset fund manager.

CUMMULATIVE PERFORMANCE (Five Years)

This document is not an offer of investment. Subscriptions for shares in the RIO Platinum Account can only be made on the basis of the current literature and The RIO Club operates strictly on a referral only basis. Past performance is not a guide to future performance and there can be no assurance that the RIO Platinum Accounts objective(s) will be met. The value of investments and the income from them can fall as well as rise and is not guaranteed. Investors may not get back the full amount invested. Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Current tax levels and reliefs may change and depending on individual circumstances this may affect the investment return. For further information please refer to the terms and conditions.

RIO PLATINUM ACCOUNT USD

VOLATILITY & RISK (24 Months)	
Annualised Volatility	9.59%
Return for Period	14.25%
Best Monthly Return	4.27%
Worst Monthly Return	-2.76%
Risk / Reward Ratio	5.17:1

The risk/reward calculation is a division of net profit (the reward) by the price of your maximum risk. Any investor should determine their acceptable risk, but it is always best to be more conservative with risk than aggressive with reward.
