## MANAGER COMMENTS

The Regular Account USD posted a loss of 0.91% in March whilst its benchmark (Dow Jones) lost 3.83% in the same period. During the month, I bought Lockheed Martin stock on Tuesday the 25th and sold Elbit Systems Ltd, moving the capital back to safety, the sale avoided losses as the stock fell back. On the 31st I sold the accounts holdings in Lockheed Martin, banking gains and moving profits and capital back to cash. I also bought and sold Wheaton Precious Metals Corporation stock, banking a net gain of over 1.5%.

The current equities held have a combination of promising technical indicators and strong fundamentals, and as such, the account is ideally positioned as we entered April.

The Market - Volatility is unlikely to taper off as we enter April so the stock market sell-off is, in my opinion, not over yet. That said, there would certainly be relief on any positive news that the tariffs would be suspended or even better reduced. Without this the market's upside is capped.

## INVESTMENT OBJECTIVE

The RIO Regular Investment Account is a high-risk trading platform through which RIO invests in the currency, equities and commodity markets. The Account may also invest in other high risk traded securities, where the potential gains are deemed to be in line with the risk reward ratio. The trading strategy favours a midterm investment of 4 - 5 years due to the expected short-term volatility.

Currencies - The Account provides exposure to a traded basket of hard currencies from countries with sound monetary policies. Longer term this strategy seeks to profit from a rise in hard currencies relative to the decline of the US Dollar.

Commodities - The Account's focus is directed to trading Gold, Silver, Oil and Uranium and their associated markets. The Investment Manager has over two decades trading experience in these markets during which time he has exceeded the target returns.
