

Investment Manager Comments

This is the latest edition to the Club's active stock trading platform. The product was launched to take full advantage of the predicted stock market volatility caused by Brexit. The Account has now produced no less than five consecutive gaining months, with the total gain to date being 6.89%.

In the short-term, I am expecting and am awaiting the arrival of a UK stock market correction. Importantly I am ready to take full advantage of this. Those invested should take note that if predictions are proven accurate, then we could easily see a double digit gain in coming months. However, looking further ahead, as Brexit negotiations continue I expect stock market volatility and, accordingly, investment opportunities for those prepared and well versed in this market.

The Account has since launch benefited from actively trading Barrett Dev, this stock is listed on the London exchange. It may be of interest to point out that this stock has also been traded successfully for the sister account, RIO Regular Investment Account (USD), the same strategy being used in both cases, i.e. all stocks being actively traded, and none being bought and held.
