

RIO Smart Money recorded a gain of 4.96% in its first quarter, getting off to a good start. This inactive investment is targeting sectors that are set to benefit from the clean energy revolution, forecast to be a \$95 trillion transition globally. That's more money than the value of the London Stock Exchange; the entire crypto market and the 5G revolution combined.

This investment product benefits from a unique charging structure; to be precise there are no administration fees levied, nor are there any management fees, and even the establishment charge is covered by RIO, the only charge applied is performance-related - no performance - no fees it's as simple as that.

Smart Money focuses on companies that manufacture electric vehicles, self-driving lorries, vans, and their critical parts suppliers. The mining company, Rio Tinto, now uses autonomous trucks to haul iron ore 24 hours a day in Australia. The US Postal Service is using self-driving trucks on a 1,000-mile mail run between Phoenix and Dallas. Courier UPS is yet another company to switch from fossil-fuelled vehicles to electric trucks; in fact, they ordered 10,000 last year and already have autonomous trucks on the road in Arizona. Walmart is rolling out self-driving trucks in Arkansas this year.
